

Laptop 101 – How to Access the NYA Network from Home (VPN)

The VPN is a method of connecting to the on-campus network when you are off campus.

1) Open the “Cisco VPN Client” via “Start – All Programs – Cisco Systems VPN Client – VPN Client”.

2) After the client has opened select the NYA connection and Click the “Connect” button.

3) There will then be a prompt where you will enter your NYA username, password, and domain which is "NYA". Click "OK" to connect.

4) You're now connected to the VPN and ready to use whatever network resources you need to. Once you're finished, you have to disconnect from the VPN. This is done by right clicking on the VPN Icon (a padlock), found in the bottom right toolbar, and selecting disconnect.
