

# Laptop 101 – Connecting to the Wireless Network

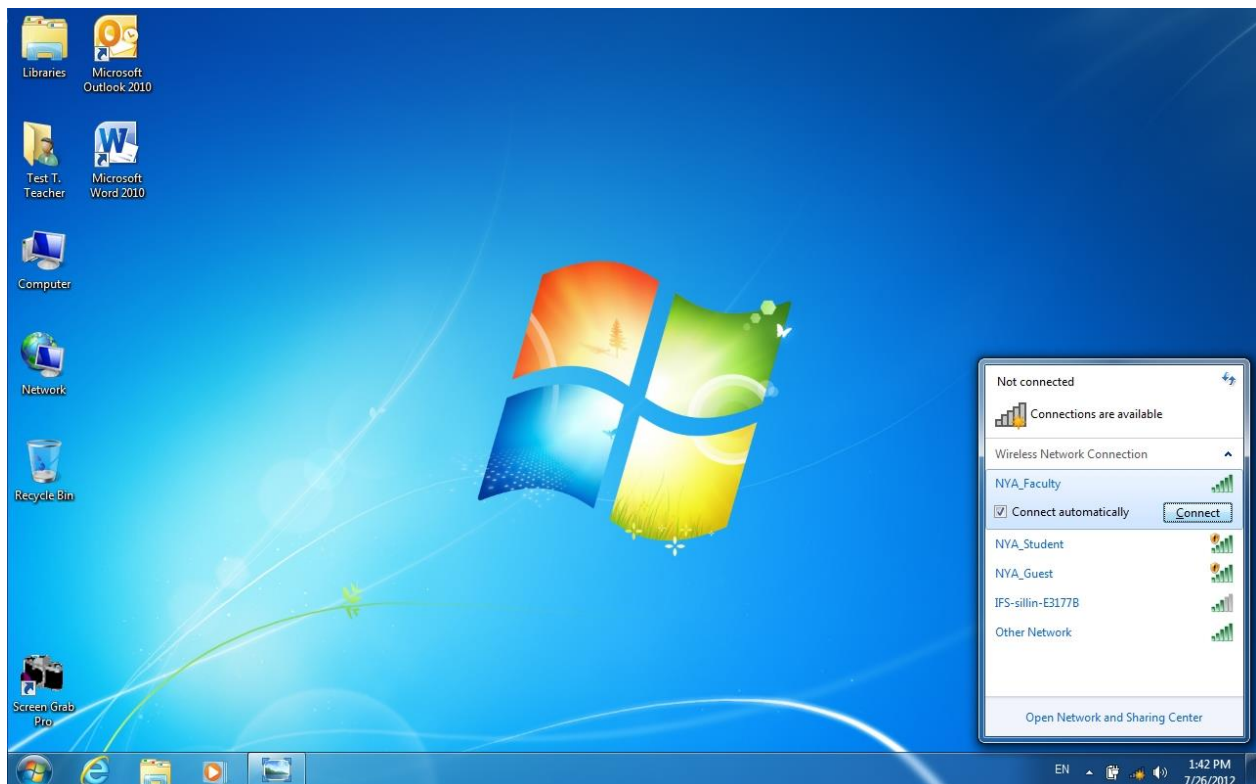

With recent updates to our wireless network, faculty should only have to manually connect to the wireless once. All subsequent connections should occur automatically.

To connect to the wireless network:

- 1) First, make sure that wireless is enabled with the switch found on the side of your computer.
- 2) Click on the network icon in the bottom right corner of the Screen (See picture below).

- 3) Next click "NYA\_Faculty", then "Connect" (See picture below).

- 4) It will show a dialogue box indicating that it is connecting. Once that disappears you should be ready to use the NYA wireless network.
